

FBM202 Thermocouple/mV Input Module

The FBM202 Thermocouple/mV Input contains eight thermocouple input channels, and one isolated RTD reference junction compensation channel.

OVERVIEW

The FBM202 Thermocouple/mV Input contains eight thermocouple input channels, and one isolated RTD reference junction compensation channel (for terminal temperature sensing). Each thermocouple/mV channel accepts standard thermocouples for various temperature ranges, and each provides thermocouple burnout detection (up-scale). The inputs are galvanically isolated from other channels and ground.

The module performs the signal conversion required to interface the electrical input signals from the field sensors to the optionally redundant Fieldbus. It executes an Analog Input application program, which provides integration time and Rate of Change Limits configurable options.

Two types of passive termination assemblies are available for the FBM202:

- ▶ DIN rail mounted TAs, similar to those used with the other 200 Series FBMs
- ▶ Baseplate-mounted TA, which mounts directly onto the field I/O connectors of the 200 Series

baseplate. These TAs provide field I/O wiring support for two FBM202s in paired slots (that is, in positions 1 and 2, 3 and 4, 5 and 6, or 7 and 8), as shown in Figure 1.

Figure 1. Baseplate-Mounted Termination Assembly

When connected to the appropriate TAs, the FBM202 module provides functionality formerly provided by the 100 Series FBM I/O subsystem. TAs are available which support the functionality of the 100 Series FBM02.

FEATURES

Key features of the FBM202 are:

- ▶ Eight channels for input of thermocouple signals
- ▶ One isolated RTD reference junction compensation channel (for terminal temperature sensing)
- ▶ Each input channel is galvanically isolated
- ▶ Compact, rugged design suitable for enclosure in Class G3 (harsh) environments
- ▶ Execution of an analog input application program that provides conversion time and configurable options for Rate of Change Limits
- ▶ High accuracy achieved by sigma-delta data conversions for each channel
- ▶ Termination Assemblies (TAs) for locally or remotely connecting field wiring to the FBM202

HIGH ACCURACY

For high accuracy, the module incorporates Sigma-Delta data conversion on a per-channel basis, which can provide new analog input readings every 25 ms, and a configurable integration period to remove any process noise and power line frequencies.

Each time period, the FBM converts each analog input to a digital value, averages these values over the time period and provides the averaged value to the controller.

COMPACT DESIGN

FBM202 has a compact design, with a rugged extruded aluminum exterior for physical protection of the circuits. Enclosures specially designed for mounting the FBMs provide various levels of environmental protection, up to harsh environments, per ISA Standard S71.04.

VISUAL INDICATORS

Red and green light-emitting diodes (LEDs) incorporated into the front of the module provide visual status indications of the FBM operational status.

EASY REMOVAL/REPLACEMENT

The module can be removed/replaced without removing field device termination cabling, power, or communications cabling.

FIELDBUS COMMUNICATION

A Fieldbus Communications Module or a Control Processor interfaces to the redundant 2 Mbps module Fieldbus used by the FBMs. The FBM accepts communication from either path (A or B) of the 2 Mbps Fieldbus — should one path fail or be switched at the system level, the module continues communication over the active path.

MODULAR BASEPLATE MOUNTING

The module mounts on a DIN rail mounted baseplate, which accommodates up to four or eight Fieldbus Modules. The Modular baseplate is either DIN rail mounted or rack mounted, and includes signal connectors for redundant Fieldbus, redundant independent dc power, and termination cables.

TERMINATION ASSEMBLIES

Field I/O signals connect to the FBM subsystem via a:

- ▶ DIN rail mounted TA, or
- ▶ Baseplate-mounted TA.

The TAs used with the FBM202 are described in “FUNCTIONAL SPECIFICATIONS – TERMINATION ASSEMBLIES” on page 8.

FUNCTIONAL SPECIFICATIONS

Input Channels

Eight isolated and independent thermocouple/mV input channels. One isolated reference junction temperature compensation channel.

Input Range

–10.5 to +69.5 mV dc (–10.5 to +69.5 mV dc equals 0 to 64000 raw counts. Input of 71.419 mV equals 65535 raw counts (full range of module))

Reference Junction

Reference junction temperature compensation is provided by a 4-wire 100 ohm platinum RTD (IEC 751, Class B) at the termination assembly.

Accuracy

MILLIVOLT INPUT

$\pm 0.03\%$ of span ($\pm 27 \mu\text{V}$) at 25°C

RTD CHANNEL

$\pm 0.03\%$ of span

RTD REFERENCE JUNCTION CONFORMITY

$\pm 0.25^\circ\text{C}$

THERMOCOUPLE CONFORMITY

$\pm 0.25^\circ\text{C}$

ACCURACY TEMPERATURE COEFFICIENT

$\pm 50 \text{ ppm}/^\circ\text{C}$

RTD REFERENCE JUNCTION MEASUREMENT ACCURACY

$\pm 0.50^\circ\text{C}$ (When using the RTD internal to the Foxboro supplied termination assemblies)

DIFFERENTIAL INPUT IMPEDANCE

10 M Ω

COMMON MODE VOLTAGE

Up to 30 V ac or 60 V dc

Integration Period

Software configurable

Input Open Circuit Voltage

250 mV dc through 10 M ohms (mV channels)

Input Signal A/D Conversion

Each channel performs A/D signal conversion using an independent Sigma-Delta converter.

Typical Thermocouple Types

B, E, J, K, N, R, S, T and other millivolt signals

Thermocouple Burnout Detection

Full upscale value

Input Channel Isolation

Each channel is galvanically isolated from all other channels and earth (ground). The module withstands, without damage, a potential of 600 V ac applied for one minute between any channel and ground, or between a given channel and any other channel.

CAUTION

This does not imply that these channels are intended for permanent connection to hazardous voltage circuits. Connection of these channels to voltages greater than 30 V ac or 60 V dc violates electrical safety code requirements and may expose users to electric shock.

Communication

Communicates with its associated FCM or FCP via the redundant 2Mbps module Fieldbus.

Power Requirements

INPUT VOLTAGE RANGE (REDUNDANT)

24 V dc, +5%, -10%

CONSUMPTION

3 W (maximum)

HEAT DISSIPATION

3 W (maximum)

Calibration Requirements

Calibration of the module and termination assembly is not required.

PHYSICAL SPECIFICATION

Mounting

MODULE

FBM202 mounts on a baseplate. The baseplate can be mounted on a DIN rail (horizontally or vertically), or horizontally on a 19-inch rack using a mounting kit. Alternatively, FBM202 mounts on a 100 Series conversion mounting structure.

Refer to *Standard 200 Series Baseplates* (PSS 31H-2SBASEPLT) or *100 Series Conversion Mounting Structures* (PSS 31H-2W8) for details.

TERMINATION ASSEMBLY

The DIN rail mounted TA mounts on a DIN rail and accommodates multiple DIN rail styles including 32 mm (1.26 in) and 35 mm (1.38 in). The baseplate-mounted TA mounts on the two field I/O connectors associated with its two FBM202s on a 200 Series baseplate.

TERMINATION ASSEMBLIES AND CABLES

Field I/O signals connect to the FBM subsystem via DIN rail mounted or baseplate mounted termination assemblies (TAs). Both these types of TAs are electrically passive. The TAs for the FBM202 are available in the following forms:

- ▶ Compression screw type (DIN rail mounted) using Poly Vinyl Chloride (PVC) or Polyamide (PA) material
- ▶ Compression screw type (baseplate mounted) using Polycarbonate/Acrylonitrile Butadiene Styrene (PC/ABS)
- ▶ Ring lug type (DIN rail mounted) using Polyvinyl Chloride (PVC) Polyamide (PA) material

Each DIN rail mounted TA and its associated termination cable provides a feedthrough connection between eight 2-wire thermocouple/mV analog input signals and an FBM202 Thermocouple/mV Input Module. Each baseplate mounted TA provides a

feedthrough connection between sixteen 2-wire thermocouple/mV analog input signals and two FBM202 Thermocouple/mV Input Modules.

Reference junction temperature compensation is provided by an isolated resistance temperature detector (RTD) that is integral to the termination assembly. The baseplate mounted TA contains an RTD for each FBM202.

See "FUNCTIONAL SPECIFICATIONS – TERMINATION ASSEMBLIES" on page 8 for a list of TAs used with the FBM202 module.

A removable termination cable connects the DIN rail mounted TA to the FBM via a field connector on the baseplate in which the FBM is installed. Termination cables are available in the following materials:

- ▶ Polyurethane
- ▶ Low Smoke Zero Halogen (LSZH).

Termination cables are available in a variety of lengths, up to 30 meters (98 feet), allowing the termination assembly to be mounted in either the enclosure or in an adjacent enclosure. See Table 2 for a list of termination cables used with the TAs for the FBM202 module.

FUNCTIONAL SPECIFICATIONS – TERMINATION ASSEMBLIES

FBM Type	Input Signal	TA Part Number (a)			Termination Type(b)	TA Cable Type (c)	TA Certification Type (d)
		PVC	PA	PC/ABS(e)			
FBM202	Eight isolated and independent thermocouple/mV channels, passive feedthrough with FBM202 channel isolation with one 4-wire 100 ohm platinum RTD (IEC 751, Class B)	P0916AC P0916AD	P0916XH P0917JL		C RL	2	1
	Two sets of eight isolated and independent thermocouple/mV channels, passive feedthrough with FBM202 channel isolation with one 4-wire 100 ohm platinum RTD (IEC 751, Class B)			P0928CN	C Baseplate-mounted)	n/a	1

(a) PVC is polyvinyl chloride rated from -20 to +50°C (-4 to +122°F); PA is polyamide rated from -20 to +70°C (-4 to +158°F).

(b) C = TA with compression terminals; RL = TA with ring lug terminals.

(c) See Table 2 for cable part numbers and length.

(d) See Table 1 for Termination Assembly certification definitions.

(e) PC/ABS is Polycarbonate/Acrylonitrile Butadiene Styrene (PC/ABS) rated from -20 to +70°C (-4 to +158°F).

Table 1. Certification for Termination Assemblies

Type	Certification
Type 1	TAs are UL/UL-C listed as suitable for use in Class I; Groups A-D; Division 2 temperature code T4 hazardous locations. They are CENELEC (DEMKO) certified EEx nA IIC T4 for use in Zone 2 potentially explosive atmospheres.

Table 2. Cables Types and Part Numbers

Cable Length m (ft)	Type 2 P/PVC (a)	Type 2 LSZH(b)

25.0 (82.0)	P0916EB	P0928AU
30.0 (98.4)	P0916EC	P0928AV

(a) P/PVC is polyurethane outer jacket and semi-rigid PVC primary conductor insulation. Temperature range; -20 to +80°C (-4 to +176°F)

(b) Low smoke zero halogen or low smoke free of halogen (LSZH) is a material classification used for cable jacketing. LSZH is composed of thermoplastic or thermoset compounds that emit limited smoke and no halogen when exposed to high sources of heat. Temperature range; -40 to +105°C (-40 to +221°F)

Use of Termination Assemblies in 100 Series Upgrade Subsystem

When an FBM202 is used to replace the 100 Series FBM02, it may use any of the appropriate termination assemblies listed above for the FBM02's field I/O wiring. Alternatively, the FBM202 can accept this field wiring through a Termination Assembly Adapter (TAA) instead of a termination assembly. This is discussed in *Termination Assembly Adapter Modules for 100 Series Upgrade* (PSS 31H-2W4).
